Severe Community Acquired Pneumonia

Severe Community Acquired Pneumonia is a book in which chapters are authored and the same topics discussed by North American and European experts. This approach provides a unique opportunity to view the different perspectives and points of view on this subject. Severe CAP is a common clinical problem encountered in the ICU setting. This book reviews topics concerning the pathogenesis, diagnosis and management of SCAP. The discussions on the role of alcohol in severe CAP and adjunctive therapies are important topics that further our understanding of this severe respiratory infection.

Pediatric Respiratory Diseases

This is a comprehensive and authoritative textbook on pediatric pulmonology. Edited by Pablo Bertrand and Ignacio Sánchez, renowned academics and pediatricians from the Pontifical Catholic University of Chile, it encompasses five sections and 74 chapters, presenting and discussing the most important topics related to pediatric respiratory diseases. Written and presented in a simple and didactic format, it intends to ease learning and settlement of doubts in pediatric respiratory diseases. The reader is naturally introduced into the physiology, diagnosis, syndromes, diseases and the treatment associated with the respiratory pathologies affecting children. The chapters include algorithms for the treatment of various syndromes and updated treatment proposals grounded in evidence-based medicine for more than 50 pulmonary diseases. Pediatric Respiratory Diseases – A Comprehensive Textbook is an essential reference for the proper clinical approach to respiratory diseases in children. It is intended for all interns, residents and fellows with interest in pediatric pulmonary medicine, as well as practicing physicians, general practitioners, pediatricians and pulmonologists who face pediatric respiratory disorders in daily clinical practice.

Mandell, Douglas and Bennett's Principles and Practice of Infectious Diseases

Discusses infectious diseases by major clinical syndrome, specific etiologic organism, and by host characteristics for patients who are compromised.

CDC Yellow Book 2018: Health Information for International Travel

An up-to-date, definitive guide to staying safe and healthy anywhere in the world. Completely updated for 2018 with expanded guidelines for Zika virus, cholera vaccine, and more.

Disease and Mortality in Sub-Saharan Africa

Current data and trends in morbidity and mortality for the sub-Saharan Region as presented in this new edition reflect the heavy toll that HIV/AIDS has had on health indicators, leading to either a stalling or

reversal of the gains made, not just for communicable disorders, but for cancers, as well as mental and neurological disorders.

Pediatric Respiratory Medicine

This user-friendly text presents current scientific information, diagnostic approaches, and management strategies for the care of children with acute and chronic respiratory diseases. A consistent chapter format enables rapid and effortless location of the most current protocols on manifestations, etiologies, triggers, approaches to treatment, complications, and preventative strategies. Includes guidance on differential diagnosis to help determine which disease or condition the patient may have. Uses extensive color-coded algorithms to facilitate quick diagnosis, management, and treatment decisions. Provides the latest scientific information and diagnostic and management strategies for the care of children with respiratory illnesses. Presents cutting-edge coverage with new information on the biology of, and the influences on, the respiratory system during childhood, as well as the diagnosis and management of both common (ie, wheezing infant, cystic fibrosis, tuberculosis) and.

Infectious Diseases of Argentina is one in a series of GIDEON ebooks which explore all individual infectious diseases, drugs, vaccines, outbreaks, surveys and pathogens in every country of the world. Data are based on the GIDEON web application (www.gideononline.com) which relies on standard text books, peer-review journals, Health Ministry reports and ProMED, supplemented by an ongoing search of the medical literature. Chapters are arranged alphabetically, by disease name. Each chapter is divided into three sections: 1. Descriptive epidemiology 2. Status of the disease in Argentina 3. References A chapter outlining the routine vaccination schedule of Argentina follows the diseases chapters. There are 364 generic infectious diseases in the world today. 232 of these are endemic, or potentially endemic, to Argentina. A number of other diseases are not relevant to Argentina and have not been included in this book. In addition to endemic diseases, all published data regarding imported diseases and infection among expatriates from Argentina are included.

Get comprehensive guidance on treating patients through a dual focus on neonatology and perinatology. See nuances and details in over 800 illustrations that depict disorders in the clinical setting and explain complex information. Find the information you need easily with indexing in both volumes that provides quick access to specific guidance. Spot genetic problems early and advise parents of concerns thanks to completely new section on this topic. Tackle the health problems associated with preterm births through a new chapter on The Late Preterm Infant. Understand the fetal origins of adult disease through a

new chapter that focuses on conditions that originate in the womb. Stay current on the developments and research surrounding neonatal anemia from the entirely new chapter on Blood and Hematopoietic System highlights. Obtain more global perspectives and best practices from an increased number of international contributions in this edition.

Kendig and Chernick's Disorders of the Respiratory Tract in Children

This book presents a complete overview of COVID-19 and provides a series of in-depth analyses of the literature and a comprehensive discussion and perspectives on promising anti-SARS-CoV-2 agents based on the system of ethnopharmacology, which covers Chinese medicine, traditional medicines of India and Africa, Turkish folk medicine, essential oils, and some well-known medicinal plants. In this book, the current status of therapeutic strategies against COVID-19 was summarized and a perspective of potential options for the future was proposed. Based on ethnopharmacology, some well-established traditional herbal formulations and bioactive compounds with anti-virus activity were repurposed for managing COVID-19 and post-illness, including neurological disorders and kidney illness. Using drug discovery tools, promising immune enhancers were explored from phytochemicals against SARS-CoV-2. Nutraceuticals from dietary plants, spices, and fruits with anti-virus and antioxidant activities were recommended to prevent infection or severe illness caused by emerging variants. With the aid of systems pharmacology, researchers have gained insights into possible molecular mechanisms of anti-SARS-CoV-2 activity and have predicted a range of candidate compounds from medicinal plants to combat COVID-19. This book explores the current knowledge of drug discovery and ethnopharmacology for managing coronavirus diseases. The content proved the anti-SARS-CoV-2 activity from natural products and traditional herbal medicines. It contributes to the management of global public health and fits the goal of establishing "Good Health and Well-Being," which is one of "The Sustainable Development Goals (SDGs) 2030".

Disease Control Priorities in Developing Countries

The book discusses new concepts and findings in the field of pulmonary function. This function is notably associated with spirometry and gas exchange at the lungs. The technique of spirometry, its clinical meaning, and reference values have all been refined over decades of its use. Although spirometry remains ancillary in diagnosis-making, it seems hardly replaceable in monitoring of lung disease progression and treatment efficacy. Pulmonary function goes far beyond spirometry. It encompasses interactions with the cardiovascular system, sleep disordered breathing, etiological factors like occupational bio aerosol exposure or cigarette smoke related issues. Pulmonary function may crumple in any respiratory ailment, the case in point being all too often respiratory tract infections. Chapters contribute to the latest thinking on molecular mechanisms underpinning pulmonary function, on patient care and attempt to keep up-to-date with current clinical and research progress. The book will be of interest to both clinicians and biomedical researchers.

Epidemiology of Influenza and Other Respiratory Pathogens During the Coronavirus COVID-19 Pandemic

This updated and expanded book was written with the underlying conviction that global health and nutrition problems can only be solved through a firm understanding of the different levels of causality and the interactions between the various determinants. This volume provides policy makers, nutritionists, students, scientists, and professionals with the most recent and up-to-date knowledge regarding major health and nutritional problems in developing countries.

Health Information for International Travel 2005-2006

These guidelines provide recommendations that outline the critical aspects of infection prevention and control. The recommendations were developed using the best available evidence and consensus methods by the Infection Control Steering Committee. They have been prioritised as key areas to prevent and control infection in a healthcare facility. It is recognised that the level of risk may differ according to the different types of facility and therefore some recommendations should be justified by risk assessment. When implementing these recommendations all healthcare facilities need to consider the risk of transmission of infection and implement according to their specific setting and circumstances.
